The 2500 IQ oil and dust tight consoles are used to protect computers against oil and dust. These cabinets are made from 14 GA steel. The opening has a curled lip around all sides to increase rigidity and to insure complete contact against the high quality seamless poured gasket. The door comes complete with a ¼" lexan window.

An interior screen shelf is provided. A back plate is provided to access the back of the computer. Cut-outs for filter fans are provided on each side of the console. The 2500 IQ includes a movable keyboard shelf with a sliding mouse pad. The lower part of the cabinet is also equipped with a sliding printer shelf. A top mount closed loop air conditioner

is installed and is available in strenghts of 2500 and 4000 BTU. The consoles are finished with heat fused polyester powder, electrostatically applied on a phosphatized base. Box and shelf are RAL 7001 (gray), doors and plates are RAL 9001 (beige). **NEMA 12-13 / IP65**
